

YİĞİT SEZER

Android Developer

İstanbul, Turkey · contact@yigitsezer.com · +90 545 933 19 14 · yigitsezer.com · [in/yigit-sezer](https://in.yigit-sezer)

PROFILE

Android developer with over five years of experience building and maintaining production applications across banking, e-commerce, and insurance. Comfortable owning technical decisions beyond individual tickets, architecture choices, crash and stability work, CI/CD pipelines, coordination across development, QA and business stakeholders. Background in Kotlin, Jetpack Compose, MVVM, and Clean Architecture, with a focus on reliability at scale.

PROFESSIONAL EXPERIENCE

Intertech Oct 2022 – Present

Android Developer · İstanbul · Subsidiary of DenizBank

- Led architecture decisions across several modules, including migrating UI from XML Views to Jetpack Compose and consolidating legacy MVP screens into MVVM for consistency across the app; designed the server-driven UI architecture for a new module.
- Took a leading role in a cross-team initiative with backend engineering to audit over 400 generic, uninformative error messages app-wide — resolving the underlying issues where possible and converting the rest into clear, actionable messages after root-cause investigation.
- Sustained crash-free session rates above 99.8% across releases on a high-traffic banking app by resolving business-logic and SDK-related crashes, reporting defects to external SDK vendors, and optimizing for device variance across Huawei, Xiaomi, and Google hardware on a single shared codebase.
- Migrated the application from a legacy taxonomy SDK to a new one.
- Wrote unit and instrumentation tests for previously uncovered classes and new features, and resolved regressions flagged by QA to keep the automated test suite reliable.
- Built and maintained build scripts covering a range of use cases — from local debugging to staged and obfuscated release builds — reducing setup overhead across the team.
- Facilitated agile ceremonies and project kickoffs, acting as a technical point of contact between the development team and the bank's business stakeholders; flagged risks and reconciled discrepancies against original design specifications across teams.

Appcent Jun 2021 – Oct 2022

Android Developer · İstanbul

- Developed Android applications for e-commerce, insurance, and internal enterprise clients as part of an agency development team.
- Worked directly with client-side project managers to translate business requirements into technical implementation.

SKILLS

Languages & Frameworks: Kotlin, Java, Jetpack Compose, Flutter, Kotlin Coroutines

Architecture: MVVM, Clean Architecture, Server-Driven UI

Testing & CI/CD: Unit Testing, Instrumentation/UI Testing, Automated Regression Testing, Build Pipeline Scripting

Practices: Agile/Scrum, Cross-Team Coordination, Technical Documentation, Ticket & Backlog Management

Domains: Banking & Financial Services, Campaigns, E-commerce, Insurance

EDUCATION

MEF University 2018 – 2022

B.Sc. in Computer Engineering · İstanbul, Turkey

LANGUAGES

English — Professional working proficiency **Turkish** — Native
